Vineyard site	Süden-Westen
Closure	Natural cork
Soil	Marl
Drinking temperature	16 °C - 18 °C

An introduced into Friuli from France grape variety. Here this vine has found an ideal soil, ideal climate and is even regarded as the mainstay of Friulian viticulture. After de-stemming the grapes are pressed and fermented 10 day temperturkontrollierten containers with the skins. With a subsequent gentle pressing, the separation of the skins of a natural decantation takes place follows. The wine remains until June in steel containers and is then pulled on bottles and stored for 3 months. Ruby red color, with a pleasant bouquet, dry, slightly grassy and pleasant taste. A wine that pleases immediately and is storable. An ideal companion to red meat dishes, roasts and not mature cheeses.
